## ELECTROLYTES WITH STRONG OXIDIZING ADDITIVES FOR LITHIUM/SULFUR BATTERIES

## ABSTRACT OF THE DISCLOSURE

Disclosed are oxidizer-treated lithium electrodes, battery cells containing such oxidizer-treated lithium electrodes, battery cell electrolytes containing oxidizing additives, and methods of treating lithium electrodes with oxidizing agents and battery cells containing such oxidizer-treated lithium electrodes. Battery cells containing SO<sub>2</sub> as an electrolyte additive in accordance with the present invention exhibit higher discharge capacities after cell storage over cells not containing SO<sub>2</sub>. Pre-treating the lithium electrode with SO<sub>2</sub> gas prior to battery assembly prevented cell polarization. Moreover, the SO<sub>2</sub> treatment does not negatively impact sulfur utilization and improves the lithium's electrochemical function as the negative electrode in the battery cell.
